

The Sanctuary

Sanctuary was a chosen concept to represent how a home should be able to provide the necessities and comfort for the user. The spatial planning is based from the profile of a female, 20 years old architecture student.

sections

structure axonometric

The project used a timber structure due to its accessibility, durability against the weather, and ease of remodelling for the upcoming 10 years. The environmental impact is also important because timber constructions are the lowest embodied CO₂ compared to other construction material
